15051-40	15051-42	32	12-Teeth	C.C.W.

All API Marine new multi-position 40MT & 42MT starters listed on this page come with a standard SAE 3 drive end housing. The drive end housing is adjusted at the factory so that the starter will fit the majority of marine applications without any modification. On some installations, where clearance is a concern, the drive end housing may be loosened and turned by the installer on location. This will rotate the starter to obtain the clearance required. In some rare cases, the drive end housing from the original starter may be removed and installed on the new motor. **40MT & 42MT Starters are Interchangeable.**

*If you are unable to identify the starter you need from the above table, please contact one of our Marine Electrical Specialists at 1-800-327-6086. Be sure to have the original Delco Remy starter number which you intend to replace.*

*Note: Cummins V8 & some CAT engines do not use SAE 3 housing. For these engines refer to the API Marine Cummins V8 starter list.*
